PROFESSIONAL EXPERIENCE

Radiant Digital

August 2025 – Present

AI Business Analyst

- Uncovered fragmented requirements across a multi-agency government landscape via **20+ stakeholder interviews**, translating findings into diagrams that stakeholders formally signed off on in playback sessions.
- Diagrammed current/future-state workflows (**50+ BPMN, DFD, UML, sequence diagrams**) and built a gap analysis exposing manual handoffs across **10+ systems**, recommending API-based integration and NIEM standards that shaped the client's modernization roadmap.
- Analyzed recurring manual reporting tasks of stakeholders and recommended a Power BI integration, replacing ad-hoc cycles with self-service data access.
- Partnered with Product, Engineering, and Client stakeholders to gather requirements and define user journeys for a multi-platform Social Media Management tool (Meta, X, LinkedIn, Instagram); authored and groomed **70+ user stories**, managing backlog in JIRA across Agile sprints.
- Built a WBS, milestone roadmap, and governance documents (Scope, Mode-of-Operations), aligning delivery leads and client stakeholders on an SOW-based engagement to keep delivery on schedule.
- Validated release readiness by coordinating SIT/UAT execution across releases, confirming features met acceptance criteria before deployment.
- Eliminated manual Excel-based reporting by leading requirements and delivery of an ingestion pipeline (Databricks, AWS S3, Unity Catalog) for a new OLTP source, transforming and backfilling historical data through Medallion Architecture into a unified dashboard with automated daily data refreshes
- Gathered requirements and evaluated 3 retrieval architectures (Knowledge Graph, Similarity Search, Full-Schema Prompting) for a Text-to-SQL AI solution, benchmarking each for query accuracy and LLM token cost.
- Drove adoption of the Knowledge Graph architecture, achieving **90% BIRD accuracy** (vs. **44–50%** baseline) and cutting LLM token spend by **55%**.
- Defined requirements and **shaped** system architecture for a **\$0.5M**, AI device-intelligence platform: unified fragmented data sources into a query interface reaching **72% accuracy**, and **guided** development of a launch-risk model that scaled to **85% accuracy** while cutting manual review effort by **60%**
- Defined requirements for an AI FinOps solution (token-cost tracking, LLM-SLM routing split with Azure AI Foundry for hosted GPT-4/5 access, guardrail enforcement) and led stakeholder demos for adoption of a chat interface and monitoring dashboard, giving stakeholders on-demand visibility into AI spend
- Identified data-governance risk from undetected upstream schema changes and defined requirements for a real-time drift-detection and alerting solution (Debezium, Kafka, OpenMetadata), safeguarding downstream reporting reliability

BMO Bank N.A.

June 2024 – August 2024

Software Developer Intern, Loan Originations Underwriting

- Migrated **50+ Java functions** to Python on AWS to modernize the underwriting stack, improving scalability and cutting infrastructure costs by **15%**
- Built and deployed AWS Lambda functions for serverless business logic and validated REST API contracts against MS SQL Server using Postman, supporting reliable delivery across the SDLC

Oracle

September 2020 – February 2023

Staff Consultant, EMEA Apps Delivery

- Owned end-to-end delivery of Absence Management and Core HR solutions for a **\$12.8B** South African telecom client spanning **20+ countries** over a **29-month** engagement, leading global requirement-gathering sessions to translate business needs into functional solutions.
- Resolved critical Absence data discrepancies from policy upgrades by redesigning the solution and led SIT/UAT and Go-Live production support across **9 countries**, restoring data accuracy and system compliance.
- Built and shipped an automated compliance tracking and reporting solution (OTBI, Fast Formula, Oracle Journeys), enabling audit-ready exception reporting with built-in data-privacy controls.
- Produced solution documentation covering business/configuration logic, functional dependencies, and Fast Formula code to support knowledge transfer and long-term maintainability
- Analyzed HCM configuration workflows and delivered **20+ RPA scripts** to automate repetitive configuration tasks, cutting manual config time by **75%**
- Analyzed Absence workflows across business units and defined requirements for 30+ Fast Formula calculations, translating policy rules into system logic
- Authored 20+ test scripts across Absence and Core HR modules to validate configurations and workflows against business requirements.

EDUCATION

The University of Texas at Dallas - Master of Science, Information Technology and Management

May 2025

Awards: Nash Leadership, ITM All Rounder, Beta Gamma Sigma Honoree (Top 10% of graduate business students)

GPA 3.888

Vellore Institute of Technology, Vellore - Bachelor of Technology, Electronics and Communication Engineering

June 2020

PROJECTS

Graduate Consulting Project | Full-Stack Development, React, Flask

Jan 2025 - May 2025

- Built and shipped a full-stack B2C platform end to end using React, Flask, and a MySQL schema, designing REST API request and response contracts, JWT-based authentication, and session-persistent caching.

SkySolve Capstone | Langchain, Python, Speech-to-Text

Jan 2025 - May 2025

- Built an AI assistant prototype automating airline customer processes with speech-to-text and email-automation to reduce manual agent follow-up.

SKILLS

Requirements Gathering | Stakeholder Management | Process & Gap Analysis | BPMN/DFD/UML Diagramming | User Story Writing & Backlog Management | Agile/Scrum | JIRA | SIT/UAT Testing| MS Visio | SQL | Python | PowerBI | Oracle Fusion HCM | OTBI (OBIEE) | Langchain | neo4j | Databricks | **CSPO**
